TABLE X.

THE SPECIAL STATISTICS OF MANUFACTURES

IN

THE UNITED STATES,

SHOWING

KINDS, QUANTITIES, AND VALUES OF MATERIALS AND OF PRODUCTS, WITH THE NUMBER AND KINDS OF MACHINES IN USE, FOR THE FOLLOWING INDUSTRIES:

Agricultural Implements.
Bagging: Flax, Hemp, and Jute.
Boots and Shoes.
Brick and Tile.
Carpets, (other than Rag.)
Cheese.
Cotton Goods.
Flouring and Grist Mill Products.
Hosiery.
India-Rubber and Elastic Goods.
Iron, Pig.
Blooms.
Iron, Forged.
Rolled.
Cast.
Lead, Pig.
Leather, Tanned.
Curried.
Lumber, Sawed.
Machinery.
Musical Instruments.
Nails and Tacks.
Oil, Animal, (not Fish-Oil.)
Vegetable.
Prints.
Salt.
Sewing-Machines.
Silk.
Steel.
Sugar, (Cane,) Raw.
(Cane,) Refined.
Tar and Turpentine.
Tobacco: Chewing, Smoking, and Snuff.
Cigars.
Woolen Goods.
Worsted Goods.

BY STATES AND TERRITORIES,

AT THE CENSUS OF 1870,

AND FOR THE CENSUSES OF 1860 AND 1850, SO FAR AS THE STATEMENTS CAN BE MADE COMPARATIVE.

REMARKS ON THE SPECIAL STATISTICS OF MANUFACTURES.

The following table is intended to exhibit *in extenso* certain of the manufacturing industries which appear in Tables VIII (B) and IX (B.) The statements made herein of the values of materials and of products, of the number of hands employed, and of the amount paid in wages, agree precisely with those contained in the previous table. The characteristic feature of the present table is the account given of the machinery employed in certain branches of manufacture, and of the kinds and quantities both of materials and of products in each. The scope of the table will be better shown by an illustration. Thus, Table IX (B) presents the Worsted manufacture of Massachusetts as follows: Number of establishments, 35; number of steam-engines, 19, horse-power, 730; number of water-wheels, 25, horse-power, 2,579. Total number of hands, 5,275; males above 16, 1,626; females above 15, 3,199; youth, 450. Capital, $2,839,500; wages, $1,678,462; materials, $5,663,048; products, $8,280,541.

The present table makes the following exhibit of this industry:

NUMBER OF ESTABLISHMENTS, 35.

MACHINERY.—Number of steam-engines, 19, horse-power, 730; of water-wheels, 25, horse-power, 2,579; of braiders, 1,980; of domestic combing-machines, 64, foreign, 54; of knitting-machines, 14; of looms, 3,341; of spindles, 96,826.

HANDS EMPLOYED.—Total number, 5,275; males above 16, 1,626; females above 15, 3,199; youth, 450.

CAPITAL.—$2,839,500.

WAGES.—$1,678,462.

MATERIALS.—Value of chemicals, $541,465. Pounds of cotton, 876,868; of wool, domestic, 6,163,816; of wool, foreign, 2,175,234; of yarn, cotton, 1,116,000; of yarn, woolen, 6,240; of yarn, worsted, 505,200. Total value of all materials, $5,663,048.

PRODUCTS.—Pounds of braids and lacings, 584,240; yards of delaines, 26,169,385; value of fancy goods, $894,757; yards of balmoral skirts, 86,880; yards of worsted dress goods, 2,983,206; pounds of worsted yarn, 1,935,686. Value of all products, $8,280,541.

The value of the additional information thus presented does not need to be enforced by remark. It is only necessary to say that the statement of kinds and quantities is of special importance at the present time, by reason of the general disturbance of values and the depreciation of the national currency. In order that comparison may be justly made with preceding or succeeding censuses of industry, statements of the kinds and quantities of articles produced are, and will be, absolutely essential.

Several industries which would naturally be looked for in these "Special" Tables of Manufactures will not be found herein. Among these are, notably, cars, cordage, fire-arms, gas, distilled and other liquors, paints, and paper. The reason for their non-appearance in this table is found in the fact that the Manufacturing Schedule of the census is poorly adapted to obtain the statement of kinds and quantities. For a discussion of this latter point reference is made to pp. xxxv and xxxvi of the Population Volume, and to p. 384 of the present volume.

REMARKS ON THE STATISTICS OF FLOURING AND GRIST-MILL PRODUCTS.

The construction of the above table is wholly peculiar, as respects the relation between materials and products. This peculiarity of form is due to the desire of the Superintendent to exhibit the flouring interest proper of the country, distinct from the custom-work of the ordinary "grist-mill." In reading this table it needs to be borne in mind that while the amount of grain specified under the head of materials embraces all that was ground for individual owners as well as what was ground on the venture of the proprietors of mills, the amounts of flour, meal, &c., enumerated in the product only embrace the production of flouring as distinguished from grist mills. The difference between the amount of grain (of the several kinds) which would be required to produce the amounts of the several kinds of flour, meal, &c., specified in the product, and the total amount of grain actually reported under the head of materials, yields the quantity ground for individual owners. The statements respectively of the total value of materials and of the total value of the product include *all* grain ground, whether as custom-work or on personal venture, and, again, all flour, meal, &c., produced, whether for individual owners or otherwise. The table has been annotated according to this statement, but it has been apprehended that in a hasty

* Excluding flour, meal, &c., from grain ground for individual owners.

nse of the figures the caution conveyed by the notes might be overlooked. To repeat: The amount of grain specified under the head of materials includes all the work of all the grist and flouring mills returned in the census, and the value given is the value of all the materials consumed. On the other hand, the amounts of the several kinds of flour, meal, &c., specified in the product only embrace the production of mills grinding for market; but the value given in the product covers the production of both classes of establishments. No such distinction as the above was attempted in the publications of the census of 1860, and the values given, both for materials and products, therefore, embrace both classes of establishments. The fact that in a few States and Territories the number of mills exceeds the aggregate number of steam-engines and water-wheels returned, is due, firstly, to the use of wind-mills in some sections, and the employment of horses for power in others; and, secondly, to the fact that in some of the Southern States a cane-mill and a grist-mill frequently take their power from the same wheel. The latter is very generally the case in Louisiana. In South Carolina 22 flour-mills are returned as operated by horse-power. In Texas, 50 mills are returned as driven by horses, 17 by oxen, and 5 by wind. In addition to the products specified in the table, New York is returned as producing 11,550 bushels oat-meal, New Jersey 100,000 bushels, Vermont 8,500 bushels, Wisconsin 2,400 bushels.

* Under the general head of Tobacco in Table VIII (B) appear three specifications: "Tebacco and cigars;" "Tobacco, chewing and smoking, and snuff;" "Tobacco, cigars." For the purposes of Table X, the first class has been divided between the two remaining classes, so that the tetal production under the head of Tobacco, in Table X, is accounted for under the two heads of "Tobacco" and "Cigars." This change involved the separation of the cigars produced in establishments, whose main productions consisted of chewing or smoking tobacco. Thus the aggregate of the two classes, as by Table X, agree with the aggregate of the three clases, as by Table VIII (B.)

† The amounts of tobacco and snuff paying duty under the internal revenue acts, during the fiscal year ended June 30, 1870, were as follows: Of sunff, 1,168,070 pounds; of tobacco, chewing and other, 89,120,005 pounds. These amounts are inclusive of the quantities of the several articles imported, which were, for the same fiscal year—of snuff, 16,767 pounds; of tobacco, 5,981,863 ponuds; leaving the amounts manufactured in the United States as follews: of snuff, 1,151,303 ponnds; of tobacco, 83,138,142 pounds. The returns of the ceusus for the year ended May 31, 1870, as will be seen above, exhibit a productiou of snuff, 2,867,191 pounds; of tobacco, 93,965,520 pounds.

* Under the general head of Tobacco in Table VIII (B) appear three specifications: "Tobacco and cigars;" "Tobacco, chewing and smoking, and snuff;" "Tobacco, cigars." For the purpose of Table X, the first class has been divided between the two remaining classes, so that the total production under the head of Tobacco, in Table X, is accounted for under the two heads of "Tobacco" and "Cigars." This change involved the separation of the cigars produced in establishments, whose main productions consisted of chewing or smoking tobacco. Thus the aggregate of the two classes, as by Table X, agree with the aggregate of the three classes, as by Table VIII (B.)

† Includes eight establishments manufacturing cigarettes in Cameron County.

TABLE XI.

SELECTED STATISTICS OF MANUFACTURES,

SHOWING

CERTAIN SELECTED INDUSTRIES BY TOTALS OF COUNTIES IN EACH STATE AND TERRITORY,

AT THE CENSUS OF 1870.

REMARKS ON THE SELECTED STATISTICS OF MANUFACTURES.

The following table, containing the Selected Statistics of Manufactures by Counties, is intended to embrace only those industries which are so far considerable in amount as to justify space being given to them in the present publication. With this view, whenever in any county the gross production of any industry does not reach the value of $10,000, that industry is omitted. Moreover, those industries which may be called "neighborhood industries," (*i. e.*, where the production is presumably for use and consumption within the immediate locality,) are excluded from the table. These industries, according to the classification here adopted, are as follows: Blacksmithing; custom boot and shoe making; butchering; carpentering; locksmithing and bellhanging; millwrighting; house-painting; paperhanging; photographing; plastering; plumbing and gasfitting; watch and clock repairing; wheelwrighting; mechanical dentistry; the grinding, at the ordinary "grist-mill," of grain for individual owners, and not as the venture of the proprietor of the mill; and, finally, the sawing of lumber at small mills producing under the value of $2,500 annually.

The production of each of these branches of mechanical effort is duly included in Table IX (B,) which presents the full manufacturing statistics of each State by specific industries, while Table IX (A) exhibits the entire manufacturing and mechanical production of each county in each State, embracing the production of the industries which, for the purpose of the following publication, are discarded.

The reason for thus selecting the industries to be embraced in Table XI is found in the fact that the publication of the unabridged list by counties consumes an amount of space wholly disproportionate to the importance of the information conveyed. Five hundred and fifty-two pages of the Volume on Manufactures, in the census of 1860, were devoted to the county tables, a considerable proportion of the counties presenting no industries beyond carpenters', blacksmiths', and cobblers' shops, or establishments of the same general industrial grade. Now, it can always be assumed that wherever communities of men, in a civilized state, exist, these trades will be found, and they will, in any American community, bear a pretty definite proportion to population.

What cannot be assumed of any county is the existence of branches of industry which produce articles for export or for consumption irrespective of locality. It is for the purpose of more precisely locating industrial establishments of this grade that the following tables have been prepared.

A second and a stronger reason for omitting these petty and neighborhood industries is found in the fact, brought into strong relief in the Remarks prefacing the General Statistics of Manufactures, that the production of some of these trades is returned so irregularly as between States and sections, and, at the best, so partially, as to make the distribution of that product among the counties of any State of the least possible value. It would undoubtedly have been better to omit the production of these common trades entirely from the Statistics of Manufactures on the ground of the enormous deficiencies known to exist, and in the nature of the case certain to exist, in the returns; but the Superintendent was not prepared to take quite so wide a departure from the methods of previous publications. All the purposes, however, which could be served by the inclusion of these trades have been answered by their publication by totals of States and Territories. To carry the details down to counties, in the face of such wholesale deficiencies, is considered eminently undesirable, even were considerations of space in publication disregarded.

TABLE XI.—THE STATE OF ALABAMA.

INDUSTRIES BY COUNTIES.	Establishments.	Hands employed.	Capital.	Wages.	Materials.	Products.
AUTAUGA.			*Dollars.*	*Dollars.*	*Dollars.*	*Dollars.*
Carriages and wagons	3	12	8,000	4,710	5,200	17,000
Cotton goods	3	255	145,000	53,783	217,166	297,244

THE STATISTICS OF MINING

AND OF

THE FISHERIES.

REMARKS ON THE STATISTICS OF MINING.

The statistics following are of very unequal value, for the reason that the machinery of enumeration provided by the census law of 1850 was created without consideration of certain of the great mining industries of the country, (some of which, indeed, at the date of the passage of the act, had scarcely come into existence within the United States, and none of which were then of great importance,) and cannot be applied to them with any degree of success.

It may fairly be taken for granted that an attempt to enumerate cotton-spinning, coal-mining, and cod-fishing, on one and the same schedule, will always result in returns unsatisfactory in respect to one, if not two, of the three industries so widely diverse in character and conditions. In the nature of the case, no schedule could be formed which would apply equally to each of the three great branches of industry represented by the three specific industries just mentioned, unless it were one so general in form and so meager in respect to details as to meet the case of each equally, because of the least possible significance in respect to any.

As matter of fact, the schedule which, by the census law of 1850, was assigned in common to the three great departments of industry, manufactures, mining, and the fisheries, is very unequally adapted to meet successively the requirements of each. While it falls very far short of compassing all the facts which are desirable and accessible in respect to manufactures, it cannot be said to be ineffective or inapt* for the enumeration of this department of industry. It does not seek all that clearly should be done in a census of industry, but is reasonably well adapted—granted a proper system of appointing assistant marshals—to accomplish what it does attempt.

For precisely the same reasons which assure to the schedule some degree of success in enumerating manufactures, it is unfitted for the canvass of industries differing so widely in their requirements as mining and the fisheries. The coal and iron mining interests, indeed, can, though with an undue expenditure of force, and inadequately as respects the degree of detail in results secured, be enumerated under the general system prescribed for collecting the statistics of manufactures, with, perhaps, no more than the usual loss from the total value of the product. But, in respect to gold and silver mining, as to a number of smaller mining industries not dealing with the precious metals, the machinery of enumeration is so inapt and so insufficient that the results cannot honestly be published without an ample admission of errors and defects.

COAL.

The statistics of coal-mining, as obtained in the census, are, in the main, highly satisfactory. A somewhat more complete statement of the product might have been reached by a scheme of enumeration better adapted to the special conditions of this industry, and much technical information of great value obtained which the census schedules make no attempt to compass. Yet, on the whole, the general results in respect to the coal product must be pronounced excellent. They are incomparably more complete and accurate than any ever before published from official or from private sources, and probably contain in themselves as small a degree of error as can reasonably be expected in a statistical work not conducted by experts, nor by means of schedules special to the immediate industry

* This remark applies to the schedule merely, and not to the agencies provided for the collection of the information required.

under enumeration. A slight deficiency is to be noted in the coal product of Maryland, mainly in Allegany County, the cause of which the Census Office found itself unable by correspondence to reach.*

IRON.

The amount of iron ore reported as raised in the several States corresponds quite satisfactorily with information derived from other sources, and is reasonably confirmed by all the tests which it has been in the power of this Office to apply, except in the case of Pennsylvania. There is here a marked deficiency, due to the failure of assistant marshals to separately record the raising and the smelting of ore, when both industrial processes were carried on under the same ownership. From this it results that, while the product of pig-iron is quite accurately determined, the mining part of this componnd industry is largely understated. The deficiency amounts, probably, to not less than eight or nine hundred thousand tons.

One feature of this table deserves to be noted. It is the failure of the product, in several States other than Pennsylvania, to correspond even approximately with the pig-iron product of those States, as per Table X of this volume. This want of correspondence is due generally, not to the neglect of assistant marshals, but to the fact that vast and increasing quantities of ore are now, with the high prices ruling for pig-iron, and with the extension of our railway system, being transported to such considerable distances as to seriously disturb the balance between the amounts of ore raised and smelted in many States. This transportation of ores is also largely influenced by consideration of the chemical properties of the ores found in certain States—Michigan, pre-eminently—rendering them highly desirable for mixing with the local ores of other sections.

STONE-QUARRYING.

The statistics of stone-quarrying, herewith presented, are susceptible of no tests known to the Superintendent, but it may be assumed that the returns of assistant marshals embrace, at the best, only the larger quarries of the country, and have, in general, taken no account of such as are worked irregularly and for local purposes only. Undoubtedly, too, many quarries of importance have been overlooked or neglected in the enumeration. Indeed, if there is any one branch of industry to which the manufacturing schedule of the census can be said to be ill-adapted, it is the quarrying of stone and marble. The results are given for what they are worth, it being impracticable, from any information in possession of the Census Office, even to estimate the degree of deficiency.

---

* The following comparative statement of coal production and consumption has been kindly furnished the Superintendent by James Macfarlane, esq., author of a work, now in press, on the "Coal Regions of America."

The largest production of coal in the world is that of Great Britain, which is more than three times that of the United States.

A brief account of it may be useful, now that it is supposed to have attained its maximum, while ours has scarcely passed its infancy.

The following are the official statistics of the coal mined in the United Kingdom of Great Britain:

Years.	Tons mined.	Annual increase.	Annual decrease.	Increase in five years.	Increase in ten years.	Tons exported.
1854	64, 661, 401					
1855	64, 453, 070		208, 322			
1856	66, 645, 450	2, 192, 371				5, 879, 779
1857	65, 394, 707		1, 250, 743			6, 737, 718
1858	65, 008, 649		386, 058			6, 529, 483
1859	71, 979, 765	6, 971, 116		7, 318, 364		7, 006, 949
1860	84, 042, 698	6, 062, 933				7, 321, 832
1861	86, 039, 214	1, 996, 516				7, 855, 115
1862	81, 638, 338		4, 400, 876			8, 304, 852
1863	86, 292, 215	4, 653, 877				8, 275, 212
1864	92, 787, 873	6, 495, 658		20, 610, 108		8, 809, 908
1865	98, 150, 587	5, 362, 714				9, 170, 477
1866	101, 630, 544	3, 479, 957				9, 170, 477
1867	104, 500, 480	2, 869, 936				9, 953, 712
1868	103, 141, 157		1, 359, 323			10, 415, 778
1869	107, 427, 557	4, 286, 400		14, 639, 684	35, 447, 792	10, 837, 804
1870	110, 431, 192	3, 003, 635				10, 588, 425
1871						

It is remarkable that there is no authentic account of the quantity of coal mined in Great Britain previous to the year 1854. The first report of the "Mineral Statistics of the United Kingdom," giving, with all possible exactness, the quantity of coal raised, as obtained by direct application to the coal-owners, was published in July, 1855, and annually since that period a similar detailed report has been

GOLD AND SILVER PRODUCT.

The statistics of the gold and silver product, as obtained by the census, are here published in conformity with what is understood to be the requirement of law; but it would be wholly unjustifiable were the figures to be put forth without a distinct and emphatic disclaimer of their validity and authority.

In the summer of 1869, the present Superintendent of Census having been invited to lay before a committee of the United States House of Representatives his views on the best method of enumerating the industry of the United States at the approaching census, submitted the following remarks relative to gold and silver mining:

"The fullest examination which I have been able to give to the subject, inclines me to the belief that our mining industries, in part, if not altogether, deserve a special treatment in the coming census. Coal-mining and iron-mining, indeed, dealing, as they do, with heavy products, and being carried on almost exclusively within the limits of settlement and civilization, are susceptible of treatment like any other forms of industry.

"I do not, however, regard it as possible to make an enumeration of the gold and silver mining of the United States by the ordinary machinery of marshals and prepared blanks, which shall be in any way satisfactory. On the contrary, the probability is that the results under such a system would either be deceptive in the highest degree, or else depart so manifestly from the real truth of the case as to become simply grotesque. Such are the inherent difficulties of enumerating gold and silver product, owing to the high value for its bulk, and to the thousand reasons and opportunities for concealment or exaggeration; and such are the peculiar and extraordinary difficulties in our own case, owing to the fact that these industries are mainly pursued at a distance from settlement, and in a wild, wasteful, spasmodic way, that, for the officials in charge of the census to simply classify and compile the

---

issued. The following is an estimate made from the best data obtainable, by Mr. Robert Hunt, the chief of the mining record office of the United Kingdom, of all the coal mined in Great Britain since coal was first used in the country:

	Tons.
Mined in the three centuries before 1800	850,000,000
Mined from 1800 to 1850	2,000,000,000
Mined from 1854 to 1870	1,454,224,897
Total coal mined in Great Britain	4,304,224,897

The following are the uses made of the coal mined in 1869:

	Tons.
Used in iron manufactures	32,446,606
General manufacturing, steam-power, &c	25,327,213
Metallurgies, other than iron	859,231
Mines and collieries	7,225,423
Gas and water works	7,811,980
Steamships	3,277,562
On railways	2,027,500
Domestic consumption	18,481,527
Miscellaneous	195,045
Exported	9,775,470
Total production in 1869	107,427,557

Among the notable points in the above statement are the very large proportion of the coal used in the manufacture of iron, thirty-two and a half million of tons, and the small quantity used on railroads, being only two million of tons.

In looking forward to our probable future coal-trade, the great number and length of our railroads will form, perhaps, the largest item in the account of our consumption of coal, instead of one of the smallest, as in England. The use of wood in locomotive engines is only temporary. So large is the consumption of fuel in these machines, that our forests go down before them. On the New York Central and Hudson River Railroads each engine consumes seven hundred and fifty tons of coal per annum. On roads with a lighter traffic a less quantity may be used, but it cannot be questioned that the consumption of coal in this manner will very soon amount to many millions of tons.

The use of coal for domestic purposes in this country will very much exceed that of Great Britain in proportion to the population. This will be owing both to the greater severity of the climate, and the more equal distribution of property, which enables our whole people to indulge in the free use of the best fuel.

The manufacture of iron is vastly on the increase here, as well as manufacturing generally, both of which have been lately much stimulated by the increased price of coal and cost of labor in England. Our anthracite coal-trade has more than doubled from 1862 to 1872, and it is supposed that it will not hereafter very much exceed twenty-five millions of tons with our present railroads only; but, to the production of the various kinds of bituminous coal there is no limit except the demand in the interior of the country.

The exportation of coal is a branch of the trade which has scarcely begun in America, but which is destined at an early day to absorb millions of tons of our production. But it is scarcely necessary to point out the future greatness of the coal-trade of America, as it is manifest to the most superficial observer. It is not at all improbable that the census of 1880 will prove that the coal production of the United States will then exceed that of Great Britain.

returns of product which might be made to them, and to publish these as authentic and official, without exercising the freest criticism, and testing every part by information independently acquired, would be to discredit the whole work rather than to add anything to its value. I reach the conclusion, then, with all deference, that the machinery of blanks, solely, in the hands of men having no particular knowledge of the subject—in the hands, that is, of the average marshal or assistant marshal—would be found wholly inadequate to the work of enumerating the gold and silver product of the country.

"I am fully of the opinion that the investigation of the mining interests should be placed in the hands of experts, with somewhat more of freedom and fullness of method than is necessary in the case of industries which deal with bulky products, which are prosecuted in the midst of settlement and civilization, and which have long ago assumed something like stability of form and regularity of conditions, if, indeed, they have not acquired traditional limits within which their progress can safely be calculated. If this should be done, there would then be no objection, but rather a marked propriety in intrusting to the same hands the enumeration of the coal and iron mining interests of the Atlantic coast. Moreover, I take the liberty of calling the attention of the honorable committee to the fact that there are a number of mining interests much less known to the public than those which have been mentioned, yet of great economical importance, which are just beginning to develop into appreciable proportions in various parts of the country, especially at the East. They are already of consequence enough to deserve a special and careful treatment, and there is every reason to believe that, by another ten years, they will have become so much known and thought of as to give great value to a full and reliable statement of their condition at the present time. These can only be satisfactorily traced out and defined by those who have made mining and metallurgy a specialty, and have a wide acquaintance with the progress of these arts and industries in this country."

The gold and silver product for the year most nearly corresponding to the census year, is given by the Commissioner of Mining Statistics, Professor R. W. Raymond, of New York, as follows:

California	$22,500,000
Nevada	14,000,000
Oregon and Washington	3,000,000
Idaho	7,000,000
Montana	9,000,000
Colorado and Wyoming	4,000,000
New Mexico	500,000
Arizona	1,000,000
All other sources	500,000
	61,500,000

This includes the milled as well as the mined product.

The returns of the census, which exclude the value added by milling, give the gold and silver MINING product proper, as follows:

Hydraulic	$2,508,531
Placer	7,266,613
Quartz	16,677,508
	26,452,652

Allowing forty-five per cent. for the value added to the quartz product by milling, we have a gross product of gold and silver of but $33,957,531, against the aggregate reported by the Commissioner of Mining Statistics.

Although the Superintendent is somewhat distrustful of estimates of gold and silver product, especially in this country, he has no desire to diminish the force of the disparaging contrast thus presented, believing that he can shelter himself amply behind the predictions and declarations made to the House Committee on the Census, just recited.

While submitting, however, to the disparaging contrast between the product reported for 1870 and the same as estimated by the accomplished Commissioner of Mining Statistics, without any attempt to reduce its force by showing the tendency to duplication and general exaggeration inhering in all statements of bullion product, the Superintendent can yet not submit to the disparaging contrast which, on the face, exists between the published bullion product of 1860 and the same here published for 1870.

The aggregate of "gold-mining" industry for 1860, as the same appears in the United States Table of Manufactures for the Eighth Census, is shown in the following table in connection with the corresponding statement for the Ninth Census:

	1860.	1870.
Establishments	7,202	2,377
Hands	44,316	16,908
Wages	$23,661,620	$8,796,525
Product	$47,163,170	$26,452,652

From this it would appear that the bullion product of 1860 was far more successfully obtained by the officers and agents of the census than was the product of 1870. An analysis of the detailed statements for 1860, however, shows that precisely the reverse is true. Two-thirds, at least, probably three-fourths, of the aggregate of the former year was made up wholly of estimates (in which the Superintendent of the present census has not allowed himself to indulge); of duplicated production, resulting from the value of the gold or silver quartz being twice counted—once, directly after being mined, and, again, after being milled; and of still another class of duplications, and, indeed, even of triplications, resulting from the inclusion of the assaying and refining of gold and silver, all the value thus reported having been once before included as bullion, and a portion of it having been already twice reported; once as the value of ore, and once, again, as bullion, and now, a third time, as assayed or refined metal. Thus, while the totals for this industry for the United States were as given above, the totals for California were as follows, comprising, it will be seen, 94.7 per cent. of the reported product of the country:

	United States.	California.
Establishments	7,202	7,042
Hands	44,316	42,616
Wages	$23,661,620	$22,914,767
Product	$47,163,170	$44,717,333

Reference to Table II for that State, (page 34, volume on Manufactures, 1860,) however, shows that 5,000 establishments, out of 7,042, were not returned at all to the Census Office, but were estimated for by the Superintendent, without even being localized by counties within the State.

	Aggregate for California, as published.	Of which there was estimated for at the Census Office, Washington.
Establishments	7,042	5,000
Hands	42,616	35,000
Wages	$22,914,767	$17,500,000
Product	$44,717,333	$19,650,000

Making deduction on this account, we should have the totals of the State and of the United States reduced to the following:

	United States.	California.
Establishments	2,202	2,042
Hands	9,316	7,616
Wages	$6,161,620	$5,414,767
Product	$27,513,170	$25,067,333

But an examination of the tables for San Francisco County shows that, of this remaining aggregate production, not less than $10,135,000 belonged to two establishments situated in that county, employing altogether but fifteen hands, and paying but $16,440 wages. It is evident at a glance, both from the location assigned to these establishments, and from the relation of labor and wages to production, that these were simply refining and assaying establishments, not on any account to be included in the statement of "gold-mining," and reference to the returns rendered to the Census Office in respect to these establishments shows this to have been their actual character.

The gold thus embraced in the production of these establishments had clearly been once before returned, and no small portion of it probably returned twice before; once at the mine and once at the mill, so that all this product represents a duplication, and much of it a triplication of values. Treating it as a duplication merely, we should have the totals of "gold-mining" for California and for the United States, respectively, at 1860, reduced to the following:

	United States.	California.
Establishments	2,200	2,040
Hands	9,301	7,601
Wages	$6,145,180	$5,398,327
Product	$17,378,170	$14,932,333

It is further evident that considerable duplications of value have been introduced into the statement of "gold-mining" for 1860, even as thus diminished, from the fact that no returns of quartz-milling separately appear to have been made; yet it is notorious that, at that date, an important part of the ore raised was reduced by parties other than owners of mines. Just what further reduction should be made from the last total reached, viz, $17,378,170, on the account just indicated, could only be determined by reference to all the original returns of this industry at 1860, and even then with no great assurance of correctness. The subject, however, ceases to be interesting after such extensive reductions in the reported product of 1860, and the labor necessary to determine just how much "gold-mining" product was actually returned at the Eighth Census would scarcely be compensated by the value of the results.

DESCRIPTION OF THE GEOLOGICAL MAP.

For the elaborate geological map of the States and Territories, which accompanies the present volume, the Census Office is indebted to Professor C. H. Hitchcock, of Dartmouth College, Hanover, New Hampshire, who has, for many years, been engaged in the collection of information, both printed and in manuscript, from the best geologists, for the purpose of constructing a complete Geological Atlas of North America. The present effort is the first-fruit of these labors. The information was designed primarily for the larger work, but, in consequence of unavoidable delays in the issue of the Atlas, Professor Hitchcock has felt himself justified in compiling from it, for the publications of the Ninth Census, this preliminary map, which the Superintendent submits to the country, with a confidence derived from long knowledge of the scholarly care and conscientiousness which characterizes all of the author's work. The following notes from Professor Hitchcock contain all the explanatory or descriptive matter which it is deemed essential to present in this place.

In the work of compilation great assistance has been rendered by Professor William P. Blake, of Connecticut, who is responsible especially for the coloring of the western portion of the map. Professor Blake's knowledge of the Territories, both on account of personal observations and editorship of the results of other explorers' work in the reports of the Pacific Railroad surveys, enables us to present the best interpretation of the geological structure of the Territories yet offered to the public.

The following are the authorities used in the compilation of the map; only the maps employed in the compilation are cited. The special sources for the several primary maps will be given in the larger work to which reference has been made.

Maine.—Manuscript map, prepared by C. H. Hitchcock, for the State authorities, in 1863.

New Hampshire.—Manuscript map, prepared by C. H. Hitchcock in 1872, as the result of the geological survey now in progress.

Vermont.—C. H. Hitchcock's map, as published in the final report, corrected by the latest discoveries.

Massachusetts.—E. Hitchcock's map of 1844, an improvement over the one in final report, and not generally known to exist. This has been improved by his own later observations and those of C. H. Hitchcock.

Rhode Island.—C. T. Jackson's map, in final report, improved by C. H. Hitchcock.

Connecticut.—Essentially the map of J. G. Percival.

New York.—Official survey map of 1843, improved by James Hall, in Logan's map of Canada, 1869, and by others.

New Jersey.—Latest map, by Professor George H. Cook.

Pennsylvania.—Map of geological survey, 1858.

Maryland.—Map of geological survey, improved by P. T. Tyson.

Delaware.—Geological report, (no map,) by J. C. Booth.

Virginia and West Virginia.—Map prepared, by W. B. Rogers, in 1844, from the observations of geological survey, never published. Professor Rogers's ill-health has prevented him from examining our copy, and any errors that may possibly exist must be ascribed to this circumstance.

North Carolina.—Manuscript map, by W. C. Kerr.

South Carolina.—Tuomey's and Lieber's maps, revised by F. S. Holmes.

Georgia.—Map in *White's Statistics*, with improvements, especially in northwest part of the State, by J. M. Safford.

Florida.—No map of this State has ever been made.

Bahama Islands.—Manuscript map of W. M. Gabb.

Alabama.—Manuscript map, by Dr. G. Little. Northern part, by J. M. Safford.

Mississippi and Louisiana.—Manuscript map, by E. W. Hilgard.

Tennessee.—Map of final report, improved by James M. Safford.

Kentucky.—Manuscript map, by S. S. Lyon, prepared from the results of geological survey under direction of D. D. Owen.

Ohio.—Latest map of J. S. Newberry.

Michigan.—Lower peninsula, from map of Alexander Winchell; upper peninsula, from map of Foster and Whitney, with improvements by Logan.

Minnesota.—Mostly from Logan's map, with suggestions from C. A. White and a paper by James Hall.

Wisconsin.—Manuscript map, by I. A. Lapham, expressly prepared for the purpose mentioned above; largely from J. D. Whitney's report.

Iowa.—C. A. White's latest map.

Illinois.—A. H. Worthen's manuscript, embodying results of his survey.

Indiana.—Manuscript map, by Richard Owen, former State geologist.

Missouri.—Manuscript map, by G. C. Swallow, former State geologist.

Kansas.—Compiled from information given by G. C. Swallow, Meek and Hayden, J. L. Leeonte, J. S. Newberry, and W. P. Blake.

Arkansas.—Chiefly from manuscript map of Richard Owen, compiled from report of D. D. Owen.

Indian Territory.—Marcy's Red River Expedition, Jules Marcou's report, and other sources; revised by J. S. Newberry.

Texas.—S. B. Buckley's manuscript map for the eastern portion; maps of various Government expeditions, carefully considered, by W. P. Blake and J. S. Newberry.

New Mexico and Arizona.—Manuscript map, by J. S. Newberry.

Colorado.—Parts by J. S. Newberry, F. V. Hayden, and W. P. Blake.

Utah, Nevada, California, and Oregon.—Compiled by W. P. Blake, from personal observations; Pacific Railroad reports, both for United States and railroad corporations; California reports, by J. D. Whitney; Geology of 40th parallel, by Clarence King, and other sources.

Dakota, Montana, Idaho, Wyoming, and Nebraska.—Maps, by F. V. Hayden, (Reynolds's expedition, and final report on Nebraska.)

Washington Territory.—Compiled by W. P. Blake, from manuscript notes of George Gibbs, and other sources.

Canada.—Sir W. E. Logan's map, published in 1869.

The formations are arranged in nine groups, not in every respect the most natural, but the most convenient, from the material in existence. The first group of *Eozoic* includes the granites and other metamorphic rocks; both those older than Paleozoic and those more recent. In the Apalachian region there may be some Paleozoic crystalline schists. In the Territories and along the Pacific border there are many crystalline schists of Mesozoic age, a few patches of which are indicated; but their entire limits are unknown as yet. In this group is included the *Huronian System.* These are the talcose rocks of the eastern border region, referred to the Lower Silurian by W. E. Logan and others. They are largely developed in Maine.

The *Silurian System* is made to extend from the Paradoxides beds to the Lower Helderberg, inclusive, in accordance with the general usage of American geologists. There is good reason to believe that the limits of the Silurian should be modified in accordance with the views of Professor Adam Sedgwick, of Cambridge, England. In the Silurian are included the "Calciferous mica-schist," of Vermont, the "Coös group," of New Hampshire, the "Merrimack group," of New Hampshire and Massachusetts, and some schists in North and South Carolina, whose precise position is not well determined.

The Paleozoic rocks in the western portion of the map are undivided, as is true, also, of the Cenozoic, save a few Post-Tertiary lacustral areas and deltas. The lacustral areas will be much enlarged in the future, as our information shall be more precise.

COAL-MEASURES.

The most important division for giving accurate practical information is that of the "*Coal-Measures.*" With it is included in Nebraska, Kansas, and Indian Territory an inconsiderable area of Permian and Permo-carboniferous.

The following are the areas of the coal-measures in the United States:

New England basin, in Massachusetts and Rhode Island, estimated to cover 750 square miles. The coal is a plumbaginous anthracite, used to advantage in some smelting furnaces. Perhaps eleven beds may exist; best seen in Portsmouth, Rhode Island. The maximum thickness is 23 feet. The whole carboniferous system is supposed to be 6,500 feet thick, of which 2,500 pertains exclusively to the coal-measures.

Anthracite basins in Pennsylvania.—This is the most important coal district in the United States. There are four areas, having an area of 410 square miles, not including the Broad-Top semi-anthracite, which amounts to 24 more. The measures are from 2,000 to 3,000 feet thick. The number of distinct beds varies from two to twenty-five, according to the depth of the basin. The maximum amount near Pottsville is given at 207 feet, while the average cannot be far from 70 feet.—(H. D. ROGERS.)

The *Apalachian field* embraces an area of 63,475 square miles, extending from Pennsylvania to Alabama.

In Pennsylvania the aggregate thickness of the measures is from 825 to 2,535 feet. The area of the bituminous coal is 12,222 square miles, with an average thickness of 40 feet of coal.—(H. D. ROGERS.)

In Maryland the area is 550 square miles, in three separate basins. The strata are 1,500 feet thick. There are thirty-two beds in all—one of 14 feet, three of 6 feet each; others from 1 to 5 feet thick.—(P. T. TYSON.)

In Virginia (chiefly West Virginia) the coal area embraces 16,000 square miles. On the Kanawha the strata are 1,250 feet thick, with twenty-four beds of coals, of which eleven have an aggregate of 51 feet thickness. The coals seem best developed on this river.—(T. S. RIDGWAY.)

In Ohio, Dr. J. S. Newberry states the area to be more than 10,000 square miles, with a thickness of 1,500 feet, and ten workable beds of coal, corresponding in number and thickness to those of Pennsylvania and West Virginia.

In Eastern Kentucky the area is stated to be 10,000 square miles.

In Tennessee, Professor J. M. Safford states the area of the measures to be 5,100 square miles. One characteristic section gives a thickness of 578 feet. There are seven beds of coal, with a total thickness of 14 feet. The beds vary locally in their dimensions, some of them being 9 feet thick, but thinning out very rapidly.

In Georgia the area may be represented by 170 square miles.

In Alabama a hasty measurement would indicate an area of 9,000 square miles.

The *Michigan basin* has an area of 6,700 square miles, with 123 feet of measures and 11 feet (maximum) of coal. In the center the coal is thickest, thinning out to nearly the thickness of paper around the edges.—(A. WINCHELL.)

The *Illinois basin*, including Indiana and Western Kentucky, covers an area of 51,700 square miles.

In Illinois the measures occupy 41,500 square miles, are from 600 to 2,500 feet thick, and contain ten beds of coal, with an aggregate thickness of 35 feet.—(A. H. WORTHEN.)

In Indiana the measures occupy an area of 6,500 square miles, are 650 feet thick, and contain thirteen beds of coal, with an aggregate thickness of 31 feet.—(E. T. COX.)

In Western Kentucky the measures are 612 feet thick, including the millstone grit, and carry eleven beds of coal.—(E. T. COX.)

The *Missouri basin* extends from Iowa to Texas.

In Iowa, Professor White's map shows an area of 25,000 square miles, which is divided into three parts, each about 200 feet thick. The two lower divisions contain the workable coal, which amounts to 8 feet in the second, but to only 20 inches in the upper. As the highest division is everywhere underlaid by the others, the whole area must be regarded as workable.

In Missouri, Professor G. C. Swallow estimates the coal area at 27,000 square miles, and in Kansas at 17,000 square miles. The measures are 2,000 feet thick, with twenty coal-beds, from a few inches to 6 feet thick.

In Arkansas there seem to be only two beds of coal, which lie below the coal-measures proper, beneath the conglomerate, (Lesquereux.) D. D. Owen speaks of some beds from 4 to 5 feet thick, and estimates the area occupied by productive beds at 12,000 square miles.

In the Indian Territory little is known of coal. The officers of the Missouri, Kansas and Texas Railway Company find good banks of coal at several places along their line, several feet thick. The area upon the map amounts to as much as 13,600 square miles. Since the completion of the map it has been ascertained that the coal-measures are covered by the Cretaceous formation for a width of about thirty miles along the valley of the Red River in Texas and the Indian Territory; and, also, that the Tertiary area, extending southerly from Preston, is probably of Carboniferous age. These discoveries will enlarge rather than diminish the size of the Missouri basin, since the two fields are probably connected beneath the Cretaceous beds.

In Texas, according to A. B. Roessler, in the "Almanac," the coal-measures occupy 6,000 square miles. A bed of coal has been reported near Fort Belknap as 4 feet thick. Estimating from Hayden's map the coal area in Nebraska at 3,600 square miles, the total area of this great basin must be 104,600 square miles.

In Arizona, near Camp Apache, Mr. G. K. Gilbert, of the expedition under the immediate direction of Lieutenant George M. Wheeler, reports a bed of coal belonging to the true Carboniferous series. It is probable that future explorations may develop other coal-bearing areas in the Territories.

In this sketch no notice is taken of any coals which do not belong to the Carboniferous system. Other coals of commercial importance exist, especially in Eastern Virginia, and near the Union Pacific Railway. They usually belong to the Triassic or Cretaceous formations, and there are lignites in the Tertiary.

TABLES XII to XV.

NOTE.—The Statistics of Mining include Marble and stone quarrying, Oil-boring, and Peat-cutting.

TABLE XIII.—THE UNITED STATES, AND EACH STATE AND TERRITORY—BY MINING INDUSTRIES.

NOTE.—The following establishments are included in Stone-quarries: Connecticut, New Haven County, 1 barytes; Connecticut, New London County, 1 silex; Michigan, Jackson County, 1 fire-clay; North Carolina, Mitchell County, 1 mica; Vermont, Bennington County, 4 ochre.

THE MAJOR TABLES OF OCCUPATIONS,

BEING A REPRODUCTION OF

TABLES XXVI, XXVII (A), XXVIII, AND XXIX, OF VOLUME I.

REMARKS ON THE TABLES OF OCCUPATIONS.

The Tables of Occupations which follow are identical with Tables Nos. XXVI to XXIX of the volume on Population, except that Table XXVII (B) of that volume is here omitted. These tables have been reproduced from the consideration that they bear an equally intimate relation to the industrial as to the social capacity and conditions of the people.

THE SCOPE OF THESE TABLES.

The following tables embrace gainful and reputable occupations only. While expressing the employments of more than twelve millions and a half of persons, they do not seek to account for the larger number of those within the same periods of life who have no recognized occupation for which they receive compensation in the shape of wages or salary, or from which they derive products of a merchantable character. All persons, moreover, whose means of livelihood are criminal, or, in the general judgment of mankind, shameful, are excluded.

The reason for excluding gamblers, prostitutes, keepers of brothels, and such persons from the Tables of Occupations, has not been found in any sensitiveness at the mention or recognition of these classes as actually existing in the community, but in the consideration that, from the necessity of the case, the numbers thus reported must be wholly inadequate to the fact, and that a seeming count of them in the census would have the effect to mislead rather than to instruct. Here and there, at the enumeration of the Ninth Census, such persons had the assurance to report themselves by their true designations, or assistant marshals took the responsibility (and in some cases the risk) of writing down the real occupation of members of these classes who had sought to misstate their avocations, or to disguise them under ambiguous terms; but an analysis of the schedules soon made it evident that this had not been done, as indeed was not to be expected, with such uniformity as to secure even approximately correct results. All such titles were therefore dropped. Some, from these classes, may have taken refuge, through false statements, in one or another of the occupations of good repute (notably keepers of brothels as "boarding-house keepers," a euphemism familiar to the compilers of city directories,) but, as a general rule, where the calling was not correctly given, it was wholly withheld; and it may therefore be assumed that substantially the whole body of persons pursuing disreputable and criminal occupations are omitted from these tables. There are no means known to the Superintendent for accurately calculating the number thus excluded or excluding themselves.

The number of those who are not accounted for exceeds, as a matter of course, in a majority of States, the number of those who are returned as pursuing gainful occupations.

The following table exhibits the number of persons in each of the six recognized divisions of the tables, according to age and sex, in comparison with the number of living inhabitants of each such class:

	Aggregate.	Total.		10 to 15.		16 to 59.		60 and over.	
		Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
Number of living inhabitants, (10 years and over)	28,228,945	14,258,866	13,970,079	2,840,200	2,764,169	10,429,150	10,257,645	989,516	948,265
Number of persons in Occupation Tables	12,505,923	10,669,635	1,836,288	548,064	191,100	9,486,734	1,594,783	634,837	50,405
Difference	15,723,022	3,589,231	12,133,791	2,292,136	2,573,069	942,416	8,662,862	354,679	897,860

It will be observed that while the aggregate number of persons in the United States above the age of 10 is 28,288,945, only 12,505,923 are accounted for in the Tables of Occupations. An examination of the several classes

into which this aggregate is divided shows that the omissions are mainly among females, and children below the age of 16 years.

The adult males of the country are as fully accounted for as could be expected. Of 10,429,150 between the ages of 16 and 59 inclusive, 9,486,734 are assigned gainful occupations; while of 989,516 above the age of 60, 634,837 are accounted for. The difference in the former period (*i. e.*, 16 to 59) is substantially made up, first, by the number of students pursuing courses of instruction beyond the age of 16; second, by the number of persons afflicted with permanent bodily or mental infirmities disqualifying them from participating in the industry of the country; third, by the numbers of the criminal and pauper classes. The number of men of this period of life, not disabled, who are not returned as of some specific occupation, by reason of inherited wealth, or of having retired from business, is hardly important enough to be mentioned here. The difference in the latter period (*i. e.*, from 60 upwards) is accounted for by the numbers of persons respectively of the second and third classes just mentioned, and by the, perhaps, larger number of persons retired from active pursuits by reason of an acquired competence, of support secured from grown children, or of advanced age.

Turning to the table of the occupations of females, an analysis of the numbers reported as of specified occupations in the three several periods of life, shows a curious, though probably not significant, rate of progression. In the first period, the females pursuing gainful occupations are to the males as one to three; in the second period as one to six; in the third period as one to twelve.

It would not seem to be difficult to account for the females of each class who are not represented in the Tables of Occupations. The number of female children attending school during the census year, as obtained by the canvass of families (see Remarks on School Attendance, page 448 of volume I.) was 3,180,313. Assuming, as it is probably fair to do, that two-fifths of the female children under 16 who are reported as pursuing gainful occupations, are also embraced in this total of school attendance,* and on the other hand estimating the number of female children of this period of life, belonging to the pauper, vagrant, or criminal class, at 100,000, we shall have something like 500,000 school attendants among the females of the second period of life. Subtracting this from the total number of females between 16 and 59, we shall have in round numbers 9,750,000 persons, of whom only 1,594,783 appear in the Tables of Occupations, leaving, say, 8,150,000 to be accounted for.

As the considerations remaining to be adduced apply equally to females of the third period of life, we may now add their number to the total already obtained, making the aggregate of females above 16 unaccounted for in the neighborhood of 9,100,000.

It would at first appear that a clear deduction should be made of one person on account of each family returned in the census, in all, 7,579,863. This number must be reduced, however, to the extent to which females, the heads of families, and doing all the housekeeping that is done for their families, are also returned as of specific occupations.

No one familiar with factory-towns will doubt that this reduction should be considerable; yet we shall probably reach the truth of the case substantially if we cut down the number to be considered as accounted for as "keeping house" to 7,400,000.† This latter number, then, is to be subtracted from the aggregate, 9,100,000, leaving 1,700,000 as approximately the number of females above 16 who are not accounted for as attending school or as keeping house for their families.

Reason will be shown later in these remarks for believing that females, both women and girls, to the number, probably, of one or two hundred thousand, (it is impossible to reach any assurance in respect to the extent of these omissions,) who do actually take part, more or less, in the (paid) industry of the country, are not embraced in the Tables of Occupations. This further deduction, therefore, has to be made. Taking the mean of the two numbers just indicated, and subtracting it from the number 1,700,000, we shall have 1,550,000 as the remainder, being the number of females above 16 years of age not participating in gainful occupations, nor yet attending school or keeping house.

In the absence of data for calculation and even of reasonable grounds for conjecture, the Superintendent will not

---

* The number of female children embraced in the Tables of Occupations has just been shown to be 191,100. Of these, 73,177 were engaged in agriculture, 1,116 in trade and transportation, 25,664 in manufactures and mining, and 91,143 in personal services, 86,905 of the latter being employed as domestic servants. It is probably within bounds to assume that two-fifths of these were afforded facilities for attending school during some portion of the year.

† It must be remembered that this reduction is upon a total of only 1,645,188, the number of females of 16 years and upward appearing in the Tables of Occupations. Of this number, 323,791 are engaged in agriculture, 17,582 in trade and transportation, 328,286 in manufactures and mining, and 975,529 in rendering personal and professional services. An examination of the numbers reported under each specified occupation will lead to the conclusion that many employments, and these quite the most important, furnish practically no cases whatever of such union of family-housekeeping with paid service elsewhere. The number allowed on account of such duplication, 179,363, appears, from a particular even more than from a general view, to be ample.

attempt to distribute this total among the elements of which it is composed. Whoever will consider the numerous and various classes which appear here, grown daughters living at home, widowed mothers supported by their children, ladies living upon the income of accumulated property, as well as women of the pauper, vagrant, and criminal classes, will be surprised that this number is as small as it is, rather than that it is so large.

DISTRIBUTION BY AGES.

In order to enable such comparisons as the above to be readily made between the total number of inhabitants (male and female) in each period of life, and the number of persons engaged in any or all gainful occupations within that period, certain of the following tables are introduced by statements of the number of males and females of ages, respectively, 10 to 15, 16 to 59, and 60 years and upwards. It needs to be said that, while the class 60 and upwards was obtained by actual count, and while the sum of the two classes 10 to 15 and 16 to 59 was obtained in the same way, the distribution of this total between the two classes has been effected in a degree by calculation and not by count, for the reason that in the compilation of age and sex the "break" occurred at another place, namely, between the years 14 and 15, and not, as chances to be required for the present purpose, between the years 15 and 16. In order, therefore, to the comparison above indicated, the number of persons of each sex who had reached the age of 15 at the date of enumeration, but were still under 16, has been carefully calculated, and the result added to the number known to be from 10 to 14, to make up the class 10 to 15.

THE CLASSIFICATION ADOPTED.

The plan pursued in the compilation of these tables has been to refer every specification of occupation to some grand division of industry; and within each of such grand divisions to constitute as many distinct subdivisions as the nature of the material furnished by the enumerators would allow to be formed with a reasonable approach to completeness, subject, however, to certain conditions which will be presented in the further course of these remarks.

The Superintendent is familiar with the reasons which have induced many European statisticians to abandon the grouping of occupations according to such assumed grand divisions of industry as Agriculture, Manufactures, Trade, &c., and to resort instead to a system of expressing the employments of the people through a large number of minute and precise specifications, susceptible of being combined and recombined successively, according to different ideas or theories of classification; but he is convinced that the conditions and limitations of industrial statistics, at least within the United States, will not allow of such nicety in the treatment of material, and, moreover, that the highest purposes and the largest uses of such statistics require something closely approaching the plan of treatment adopted in the following tables.

The Superintendent is ready to admit the theoretical inferiority of the somewhat "rough-and-ready" classification he has adopted to the scientific precision of the British system; but it is decisive of the question, in his mind, that he has never known the census statistics of occupations resorted to, either in congressional debates or in newspaper or magazine discussions, for any purpose which would not be practically answered by the following tables.

It is perhaps not necessary to pursue the subject, but it may be interesting to note two things in this connection.

First. That the subdivision of labor and the organization of industry in the United States really correspond rather to the classification of occupations adopted in these tables than to the nicer distinctions of the foreign statisticians. Indeed, instead of throwing away valuable discriminations, the difficulty is so to treat the returns as reasonably to fill the classes here given. Whoever will consider the almost utter want of apprenticeship in this country, the facility with which pursuits are taken up and abandoned, and the variety, and, indeed, seeming incongruity of the numerous industrial offices that are frequently united in one person, will appreciate the force of this argument. For example, the distinctions in the profession of the law, which are known and recognized decisively in England and on the Continent, are not maintained in this country except in a few great cities, and there only in exceptional cases. The same person with us is law-scrivener, collector of debts, prosecutor of claims, counselor, attorney, possibly, also, judge. Again, the organization of domestic service in the United States is so crude that no distinction whatever can be successfully maintained. A census of occupations, in which the attempt should be made to reach anything like European completeness in this matter, would result in the return of tens of thousands of "housekeepers" and hundreds of thousands of "cooks," who were simply "maids of all work," being the single servants of the families in which they were employed. Again, the British distinction between the merchant and

the shop-keeper is impossible in this country. If anything whatever could be predicated of the two classes in this respect, it would be that the smaller dealers cling more pertinaciously to the larger title. Still, again, the British "farmer" is wholly unknown with us. The American farmer is, at least in nine hundred and ninety-five cases out of a thousand, the owner of the land he cultivates.

Second. That it is not deemed practicable, in the United States, to secure that the average enumerator shall, in the course of a canvass necessarily hurried, fill two or three thousand subdivisions with appropriate entries without much loss and confusion. As assistant marshals are appointed under the American system, nice discriminations in respect to industrial relations can hardly be maintained in a sufficient proportion of cases to give value to the aggregate results. Of course, accuracy of *definition* is of no value if the *content* be inadequate. It may even be doubted whether the enumerators of any country are capable of carrying out thoroughly any body of instructions respecting the return of occupations, which require more than the plain and simple characterization of each man's employment in the common phrase of the working people themselves. Certainly, it is not to be thought of in the United States.

The employments reported in the census have been, for the purposes of this publication, brought under four general titles, viz, Agriculture, Manufactures and Mining, Trade and Transportation, Personal and Professional Services, the latter having somewhat of a residual relation to the others, and yet in the main a substantial character, and with limits not hard to define.

The reason for making a common title for Trade and Transportation must be sufficiently evident without explanation.

Mining, which stands in idea between agriculture and manufactures, in that, like agriculture, it obtains the raw material of subsequent industrial processes, while, like manufactures, its agencies and forces are chiefly mechanical, not chemical, has, for convenience mainly, been assigned to the group of Manufactures.

A still stronger consideration of convenience, though with somewhat less clear considerations of propriety, induced the Superintendent to place the fishing industry in the category of Manufactures. The number of persons engaged in the fisheries will always and inevitably be below the fact, for the reasons, first, that this industry is usually pursued for a season only, while, for the remainder of the year, the fisherman follows some other gainful avocation under which he will preferably be reported;* second, that no inconsiderable proportion of the persons actually engaged on the water in this pursuit, at the time of the enumeration, having no families to report them are entirely omitted from the census under the American system; third, that where fisheries are carried on in vessels larger than the ordinary row or sail boat, the hands employed are generally known, not as fishermen, but as sailors. The last statement holds true of the vast majority of all persons who are engaged in the whale, cod, and mackerel fisheries. It is true that, according to the theory of a census of occupations taken in the interest of industrial science mainly, vessels so employed should, with all their hands, be excluded from the class of transportation and be returned as engaged in the fisheries; but this distinction is one which it appears hopeless to make, at least in a census of the United States, with the agencies provided by existing laws. We are compelled, therefore, to accept the result that the great majority of persons engaged in the fisheries are returned as sailors merely. The residue are not worth constituting into a separate grand division of industry, and have, therefore, been carried into the manufacturing class, to which, by the way, it may be remarked, though that affords no very good reason, the census-law assigns the fisheries.

THE COMPLETENESS OF THESE TABLES.

Comparison of the numbers reported in the Tables of Occupations with the numbers found under corresponding titles in the Tables of Manufactures, will discover discrepancies of very important extent, which require to be here accounted for, not only in justification of these tables, but for the additional light which such an investigation throws upon the industrial capacity of the country.

Not only do important discrepancies exist, but they are found to be of two kinds, of diametrically opposite direction. In one class of cases the numbers reported in the Tables of Occupations appear to be much too large; in the other, far too small. Two broad reasons are found in the very form of a census taken under existing laws in the United States, one of which explains the first class of discrepancies, while the other covers the ground of the second. As these discrepancies are capital in their extent, they require to be discussed at some length.

* Often, indeed, fishing is carried on at any season of the year only incidentally to some other occupation from which the family derives its principal support.

First, however, it needs to be stated just what constitutes a discrepancy. A failure in the numbers reported in the one place and in the other to balance exactly is not a discrepancy. On the contrary, this is to be expected; and if the numbers are found to be in excess in the proper set of tables, and to be in excess to only the proper extent, this furnishes a statistical proof of a high character. The tables in which the numbers should thus be generally found in excess are the Occupation Tables. The reason for the excess being found in these tables and not in the others is, that the schedule of manufactures gives an *average* return of the number of "hands employed," while the statistics of occupations are taken from a count of individuals upon the population schedule, and present, therefore, a *maximum* return, embracing, as they do, artisans of every class out of employment, temporarily disabled, or for some other reason not included in the actual return of any establishment.

The degree to which such excess should extend will depend, within certain limits, upon the nature of the special occupation, as well as upon the general condition of manufacturing industry throughout the country at the time. It should rarely, however, fall below six per cent. in any trade at any time, and it should quite as rarely go above sixteen per cent.

Whenever, therefore, the numbers returned in the Tables of Occupations do not exceed those under the same titles in the Tables of Manufactures by at least six per cent., and, on the other hand, whenever the former exceed the latter by more than sixteen per cent., there a discrepancy must be admitted.

And, first, of those cases where the numbers in the Tables of Occupations do not exceed those in the Tables of Manufactures by six per cent., or even fall below them.

Instances of this kind are principally confined to the returns of factory-operatives. At the present census these instances are sufficiently marked to require explanation.*

A portion of these omissions, undoubtedly, may be accounted for by the large number (41,619) returned under the head of "Mill and factory operatives not specified," as well as by the number (20,242) of "Employés of manufacturing establishments not specified;" but, in the main, the explanation of the discrepancies is found in the fact, heretofore adverted to, that women and children employed in factories are omitted in large numbers.

Second. Those instances where the numbers appearing in the Tables of Occupations exceed those in the Tables of Manufactures by more than the probable or possible difference between a maximum and an average return. Unlike the class first noted, these discrepancies affect mainly the statistics of those occupations which are pursued singly, or by twos and threes, out of large mills and factories, and even, in a considerable degree, out of shops. Discrepancies of this character in no degree discredit the statistics of occupations. They arise from the fact that the return of "Productive Industry," under the census law of 1850, is not, as indeed it was not intended to be, a complete return of the mechanical production of the country.

The census attempts the enumeration of mechanical industry only as it is carried on in shops, and thus fails to embrace that large body of individual labor which is not attached to distinct "establishments of productive industry." Moreover, the census law establishes a minimum (namely, the value of $500 annually) below which the production of shops shall not be returned: behind which unfortunate exception a host of minor establishments, producing in the neighborhood of $500, take refuge and thus escape enumeration.

The scope of these omissions may be seen in the following table:

---

* At the census of 1860, the discrepancies of this kind were still more numerous and far more extensive. A single example will suffice The Tables of Occupations characterize but a little over two thousand persons as connected with the woolen and worsted manufactures, while the Tables of Manufactures show that considerably more than forty thousand persons were engaged, upon the average, in these branches of manufacturing industry.

The census of 1860 obtained the productions of these five mechanical trades even less completely, as will be seen from the following comparison:

The effect of this wholesale omission of the production of certain trades upon the aggregate value of manufacturing and mechanical products in the country has been discussed elsewhere.

Inasmuch as it is not the Tables of Occupations which suffer from the comparison, it will not be necessary to pursue inquiry further into this class of discrepancies in the present connection. The Tables of Occupations are incontestably accurate, in a high degree, in respect to these common trades.

AN EXCEPTION.

In making such comparisons as the foregoing, between the Tables of Occupations and those of Manufactures, care should be used that the titles taken for the purpose really correspond. In some cases, even those in which the apparent correspondence is the strongest, the quantities are in fact not commensurable. An example may be found in the brick and tile manufacture. It would seem, at first glance, that the "hands employed" should answer exactly to the "brick and tile makers" in the Tables of Occupations; but, in fact, a considerable portion of the

hands employed in large brick-yards, exceeding, indeed, not infrequently, the number of craftsmen, are classed and known as common laborers, and are so returned in the census. The following comparison of the number of brick and tile makers appearing in the Tables of Occupations, with the number of hands employed in establishments producing bricks and tiles, will show the scope of this exception. It will be seen that while in two or three minor cases the number returned on the Tables of Occupations, exceeds, as we are accustomed to expect, the number in the Tables of Manufactures, the proportion of common laborers employed in brick-yards where that branch of manufacture becomes considerable, (notably in the larger manufacturing States,) is so great as to raise the numbers in the latter tables considerably above those in the former.

INCOMPLETE SUBDIVISION OF EMPLOYMENTS.

In addition to the apparent deficiencies or discrepancies which have been noted, one general remark will suffice in explanation of many of the entries in the following tables, in respect to the accuracy of which question may naturally arise.

It must be borne in mind that the number of persons who are reported under a certain specified occupation does not necessarily embrace all the persons who perform the duties usually associated with that title, but only those who discharge such duties to the exclusion of other gainful occupations, or, at least, as their principal or sole professed means of support.

The organization of labor and the subdivision of industry vary in respect to completeness and minuteness with each successive community. As communities advance in industrial character, functions become separated, and distinct occupations become recognized. This country, from its peculiar conditions, presents almost every degree between the two extremes of industrial development in this particular. It is common to find on the returns from the present Territories, and even some of the present States of the Union, such entries as these: "Carpenter and miner," "Blacksmith and carpenter," "Blacksmith and miner." In many of the communities of the land it is difficult to draw distinctions much finer than those between the agricultural, the mining, the mechanical, and the commercial pursuit or profession. Indeed, even this is not always practicable, since it is matter of notoricty that in many of the States of the Union, and those not among the newest, the occupations of carpenter and farmer, or blacksmith and farmer, or farmer and fisherman, are frequently united in one person. In large and more prosperous communities a clear separation between such incongruous occupations takes place; yet, still, the carpenter, for instance, in nine out of ten counties in the United States, performs half a dozen functions which, in cities, are recognized as belonging to distinct trades.

The same general process which has been indicated in manufactures, occurs in the subdivision of employments known as agricultural, commercial, and professional.

Thus, the tables following show 100,406 traders and dealers whose branch of trade is not specified, while there are also reported 1,939 persons as dealing in agricultural implements; 3,392 in books and stationery; 7,019 in boots and shoes; 4,087 in cabinet-ware; 8,234 in cigars and tobacco; 7,595 in clothing; 1,163 in cloths and textile fabrics;

4,143 in coal; 2,493 in coal and wood; 1,701 in cotton; 1,765 in crockery, china, and stone ware; 17,369 in drugs and medicines; 39,790 in dry-goods; 6,402 in gold and silver ware and jewelry; 74,410 in groceries; 3,375 in hats and caps; 1,464 in ice; 9,003 in iron, tin, and copper wares; 2,261 in leather, hides, and skins; 310 in lime; 11,718 in liquors and wines; 7,723 in live stock; 9,440 in lumber; 254 in machinery; 848 in music and musical instruments; 1,455 in newspapers and periodicals; 986 in oils, paints, and turpentine; 301 in optical instruments; 11,809 in produce; 7,528 in provisions; 8,933 in real estate; and 3,152 in sewing-machines.

The want of specifications in the case of the 100,406 first mentioned, is not due to the neglect of assistant marshals, but to the fact that these persons so characterized are actually selling agricultural implements, books and stationery, boots and shoes, &c., &c., through pretty much the entire line of articles sold by those other dealers whose departments are defined because the communities in which they dwell and deal are sufficiently large to allow of the subdivision of trade.

If, therefore, we look at those occupations which emerge as distinct employments only in communities where the organization of industry and the sub-division of labor are carried to a high degree, the number of persons engaged will appear to be impossibly small, unless the above considerations are borne carefully in mind.

ANOMALOUS ENTRIES.

Other seeming discrepancies, which demand at least an allusion here, occur where persons are returned as of certain special occupations in States where it is notorious that the industries represented are not carried on; or, again, where persons, not more than one, two, or five in number, are returned in a State under a description which implies a large body of workmen, as (in illustration of both these classes) when Ohio is returned as having one silk-mill operative, it being difficult to see how one operative could justify a silk-factory in Ohio, and it being, moreover, notorious, as matter of fact, that the manufacture of silk is not carried on in that State. An adequate explanation of all cases of this general nature is found in the consideration that the census takes account of persons where they are actually residing, and assigns them to their habitual occupation, whether it is being at the time pursued or not.

In the enumeration of tens of thousands of persons out of health, or out of employment, traveling, or visiting friends in other States, it is inevitable that such apparent anomalies should arise.

Nota Bene.—Each employment specified in the following tables must be understood in connection with the class or grand division of industry under which it is placed. To many, and, indeed, most of the specifications of occupation, this warning, in the nature of the case, does not apply.

Others, however, will be misinterpreted without a reference to the more general title. Thus, "clerks and copyists" appear under the head "personal and professional services," to the number of 6,138. These are clerks to lawyers, clerks to civil engineers, copyists not attached to commercial houses or manufacturing establishments, &c. "Clerks" also appear under the head of "Manufactures and Mining," so far as persons are employed in a purely clerical capacity in those branches of industry; while, under the title of "Trade and Transportation," "clerks" appear several times as "clerks in stores," "clerks in banks," "clerks in railroad-offices," &c. In such cases, "cross-references" will generally be found between the several parts of the tables where these entries occur.

ERRATA.

In preparing for the press the Statistics of Occupations contained in the present volume, and in the volume on Population, the number of "domestic servants," females, between the ages of 16 and 59, in the city of Detroit, was, by a clerical error, made to appear 27,146, instead of 2,746. This error was carried through the line of "domestic servants," for that city, and into the totals of the State, and the United States.

By the same species of error the number of "lawyers," in the State of Vermont, males, between the ages of 16 and 59, was made to appear 48, instead of 418. This error was also carried into the total of the United States.

The true totals for these occupations are, therefore, as follows:

Domestic servants.

	Number.	AGE AND SEX.						SELECTED NATIVITY.											
		10 to 15.		16 to 59.		60 and over.		United States.	Germany.	Ireland.	England and Wales.	Scotland.	Sweden, Norway, & Denmark.	France.	Other north of Europe.	Italy.	Other south of Europe.	British America.	China and Japan.	Other and unknown.
